Project Title: Skins Website

- Work on making the menu function the way we expect.
- Vertical buttons on the homepage for all three generations, and for Skins Redux. Don't worry about images not being vertical, just cut them off into vertical shapes.
- On the pages for each generation, have images for each character and text with it. Consider alternating between black and white background and text for each character just to make the page look more interesting.
- Maybe, if time permits, play around with a denser font for the headings.
- Center content of landing page.
- Buttons on the landing page could use some padding around the words. Image could also be moved up a bit.
